According to our (Global Info Research) latest study, the global Proximal Humeral Locking Plate market size was valued at US\$ 889 million in 2025 and is forecast to a readjusted size of US\$ 1299 million by 2032 with a CAGR of 5.6% during review period.

The proximal humeral locking plate is an orthopedic internal fixation implant used to fix proximal humeral fractures. It provides angular stability through locking screw technology, reducing screw loosening and maintaining fracture reduction, making it particularly suitable for patients with osteoporosis or comminuted fractures. This type of implant is widely used in trauma and shoulder reconstruction surgery, facilitating early patient mobilization and promoting fracture healing. The upstream of its industry chain includes medical-grade titanium alloys, stainless steel materials, surface treatment, and precision machining; the midstream encompasses implant design, CNC machining, sterilization, and packaging; and the downstream mainly consists of hospitals, orthopedic centers, and distributors, along with supporting surgical instruments, physician training, compliance management, and postoperative care services. In 2025, the global production of proximal humeral locking plates was approximately 640,000 units, with a global average market price of approximately US\$1,350 per unit. The gross profit margin of major companies in the industry ranged from 50% to 70%. In 2025, the global production capacity of proximal humeral locking plates was approximately 850,000 units.
