A PTCA Rapid Exchange Balloon Catheter, or Percutaneous Transluminal Coronary Angioplasty balloon catheter, is a medical device used in cardiovascular interventional procedures. The catheter features an inflatable balloon that is typically used to dilate narrowed or blocked segments of the coronary arteries to restore blood flow. The PTCA balloon catheter is guided to the target site via a guidewire, and the balloon is then inflated to compress the plaque within the artery, widening the vessel lumen. This technique is widely used to treat coronary artery disease, helping to improve blood supply to the heart.
