Pulsed Field Ablation (PFA) is a cutting-edge medical procedure used primarily in the treatment of cardiac arrhythmias, particularly atrial fibrillation. This technique utilizes short bursts of high-voltage electrical fields to selectively ablate (destroy) heart tissue responsible for abnormal electrical signals, without causing significant damage to surrounding structures. PFA is distinguished by its ability to target specific tissues with precision, leading to improved safety and reduced procedural complications compared to traditional thermal ablation methods. The procedure can be performed using catheter-based systems, making it minimally invasive. As a result, PFA is gaining popularity in the electrophysiology field for its effectiveness and the potential for quicker recovery times for patients.
