Pure titanium porcelain crown belongs to porcelain fused to metal full crown, and its production process mainly includes two key steps: first, pure titanium metal is used as the material of the base crown. Pure titanium is widely used in the field of dental restoration due to its excellent biocompatibility, corrosion resistance, low thermal conductivity and small impact on nuclear magnetic resonance. Secondly, on the surface of the pure titanium base crown, a layer of low-melting porcelain powder similar to natural teeth is covered by a special process, and sintered and fused in a vacuum high-temperature porcelain furnace. This process makes the pure titanium porcelain crown have both the strength and stability of metal and the beauty and realism of porcelain materials. Pure titanium porcelain crown is suitable for a variety of dental restoration scenarios, such as tooth defects, uneven dentition, tooth discoloration, etc. It can effectively restore the shape and function of teeth and improve patients' chewing efficiency and self-confidence.
