Abstracts

According to our (Global Info Research) latest study, the global Push Button Soda Dispenser market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The working principle of the button-type soda water dispenser is that high-pressure carbon dioxide gas is poured into a sealed water bottle, so that more carbon dioxide is dissolved in the water, showing a supersaturated state. But when the pressure is reduced, for example by opening a sealed bottle to bring the pressure back to normal atmospheric pressure, the supersaturated carbon dioxide escapes as a gas from the water, so a lot of air bubbles appear in the water.
