Quantitative belt scale is a device used to continuously and accurately measure the amount of material conveyed, usually installed on a belt conveyor. It measures the flow rate, conveying speed and bandwidth of the material during the operation of the belt, and combines weighing sensors and control systems to calculate the weight and flow rate of the material in real time. Quantitative belt scales are widely used in mining, metallurgy, chemical industry, construction, coal and other industries for quantitative feeding of materials, online measurement in the production process and inventory management. It has the characteristics of high precision, stability and high degree of automation, which can ensure the precise control of material ratio and conveying amount in the production process.
