Quinacridone is an organic molecule used in the formation of organic pigments. It is an organic compound with the molecular formula $C_{20}H_{12}N_2O_2$. Quinacridone pigments comprise an important class of organic pigments. Its linear form is particularly important for exploiting it commercially. Quinacridone pigments are very novel pigments that have many diverse applications. Quinacridone pigments generally produce seven types of bright and intense colors. They are preferred compared to other pigments due to its excellent bleed and resistance to heat, its deep and vibrant colors, its high transparencies and its very good tinting value and working properties among other things.

The major players in global Quinacridone Pigments market include BASF, Clariant, Sun Chemical (DIC), etc. The top 3 players occupy about 60% shares of the global market. Asia-Pacific and Europe are main markets, they occupy about 60% of the global market. Red Pigments is the main type, with a share about 60%.
