According to our (Global Info Research) latest study, the global Radar Sensors for IoT market size was valued at US\$ 2305 million in 2024 and is forecast to a readjusted size of USD 3441 million by 2031 with a CAGR of 6.0% during review period.

Radar Sensors for IoT are used in motion detection triggering systems such as indoor and outdoor lighting solutions, automatic doors, camera and security systems, or smart home devices. Additionally, object detection can be ensured through the application of radar sensor and motion sensor ICs, since they can determine the direction of a moving object, speed of an object, distance, and depending on the antenna configuration, even the position of a moving object.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
