A reciprocating vertical lift is a special type of vertical transportation equipment, which is mainly used to transport goods or people between fixed heights. Unlike traditional elevators, reciprocating vertical lifts are usually mechanically driven, and the vertical reciprocating motion of the platform is achieved through chains, gears or hydraulic systems. Reciprocating vertical lifts consist of one or more platforms that move up and down along fixed rails. The drive system of the lift can be electric, hydraulic or mechanical, and the platform can carry goods or people, and is usually equipped with safety devices such as limit switches, emergency stop buttons, etc. to ensure safe operation.
