Abstracts

According to our (Global Info Research) latest study, the global Reclaimed Silicon Wafer market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The source of the Reclaimed Wafers comes from the monitor wafers and the dummy wafers but not the defect wafers in the semiconductor fab. The Reclaimed Silicon Wafer is closely related to the test piece. The purpose of the regenerated wafer is to recycle the test piece. After secondary processing, the wafer surface is restored to the original state mainly through etching, grinding, chemical mechanical polishing and cleaning. state, and then put it into the wafer manufacturing process to achieve the purpose of reuse.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
