Recombinant Protein Biological Research Reagents refer to reagents used in biological research that are composed of recombinant proteins. These proteins are produced through genetic engineering techniques, which involve inserting the gene encoding the target protein into a host cell (such as bacteria, yeast, insect, or mammalian cells) that subsequently expresses and purifies the target protein. These reagents are widely used in various fields of biological and medical research, including but not limited to molecular biology, cell biology, immunology, and drug development.
