Abstracts

According to our latest research, the global Recurring Revenue Finance Software market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Recurring revenue finance software, sometimes called programmatic financing, provides short-term loans (typically one to two years) to high-growth startup SaaS and e-commerce companies with annual recurring revenue (ARR). This type of loan differs from traditional financing because instead of raising capital by selling and diluting ownership of the company, the owner can borrow against its recurring income without losing a stake in the company. Typically, recurring revenue financial software integrates with a company's banking, accounting, and payment systems to provide real-time visibility into financial performance, expenses, ARR, and how funds are being used. After analyzing the data, the software provides the loan amount and either the interest rate or the percentage of future subscription fees that will be paid to the lender. These loans provide scaling companies with more cash flow that can be used for expenses in areas such as sales, marketing, or paying suppliers in advance to obtain deeper discounts.
