According to our (Global Info Research) latest study, the global Reducer for Semiconductor Equipment market size was valued at US\$ 380 million in 2024 and is forecast to a readjusted size of USD 532 million by 2031 with a CAGR of 4.9% during review period.

Reducer is a mechanical transmission device, which is used to reduce the speed and increase the torque in order to convert the high-speed rotation of the power source such as the motor into a low-speed high-torque output. This is important for applications that require precise control of speed and force. Reducers play a key role in semiconductor equipment because the process of manufacturing semiconductors requires a high degree of precision and stability. For example, robotic arms or stages used to move wafers or adjust the position of processing tools during wafer processing, lithography, etching, deposition, and other precision machining processes require very precise speed control and positioning capabilities.
