According to our (Global Info Research) latest study, the global Refrigerant Gas Sensor Module market size was valued at US\$ 121 million in 2024 and is forecast to a readjusted size of USD 167 million by 2031 with a CAGR of 4.7% during review period.

In the past, refrigerant gases used in home and commercial refrigeration and air conditioning equipment were selected based on their ability to work the most effectively at cooling. As the impact of these gases on climate change were realized, researchers began looking for alternative gases that had the same or similar efficiency - but did not contribute to the greenhouse effect. Today there are many new refrigerant gases with low environmental impact. However, some of the replacement gases are toxic and flammable. Therefore it is important when using these new gases that refrigerant leak detector sensors be used.
