According to our (Global Info Research) latest study, the global Retinal Imaging Devices market size was valued at US\$ 1184 million in 2024 and is forecast to a readjusted size of USD 1767 million by 2031 with a CAGR of 6.0% during review period.

Retinal Imaging Device provides simultaneous non-contact pole-to-periphery views of the retina in a single, patient-friendly capture. In this report include OCT and Fundus camera.

Optical coherence tomography (OCT) is an imaging technique that uses low-coherence light to capture micrometer-resolution, two- and three-dimensional images from within optical scattering media (e.g., biological tissue). Ocular (or ophthalmic) OCT is used heavily by ophthalmologists and Optometrists to obtain high-resolution images of the retina and anterior segment.

Fundus camera is a specialized low power microscope with an attached camera. Its optical design is based on the indirect ophthalmoscope. Fundus cameras are described by the angle of view - the optical angle of acceptance of the lens.

The major players in global Retinal Imaging Devices market include Zeiss, Topcon, Nikon (Optos), etc. The top 3 players occupy about 60% shares of the global market. Europe and North America are main markets, they occupy about 55% of the global market. Fundus Camera is the main type, with a share about 80%. Eye Clinic is the main application, which holds a share about 65%.
