Radiofrequency Ablation (RFA) Varicose Vein Treatment Device is a medical device used to treat varicose veins through a minimally invasive procedure. RFA devices typically consist of a catheter that is inserted into the affected vein under ultrasound guidance. Once positioned properly, the catheter delivers radiofrequency energy to the vein wall, heating it and causing it to collapse and seal shut. This process redirects blood flow to healthier veins, relieving symptoms and improving the appearance of varicose veins. RFA treatment is often preferred for its effectiveness, minimal discomfort, and shorter recovery time compared to traditional surgical methods.
