RFID surgical sponge is a surgical sponge with radio frequency identification (RFID) technology, which is used to help medical staff track and manage sponges, textiles, towels and other items used during surgery. These sponges usually have built-in RFID tags or chips, and their location information can be quickly identified and recorded through an RFID reader. The use of RFID surgical sponges can help improve the safety and efficiency of surgical procedures, reduce the risk of omissions and misuse, and protect the health and safety of patients. At the same time, it also provides medical staff with a more convenient and precise sponge management method.
