Abstracts

According to our (Global Info Research) latest study, the global Rigid Trailer Hitch market size was valued at US\$ 793 million in 2025 and is forecast to a readjusted size of US\$ 1140 million by 2032 with a CAGR of 5.4% during review period.

Rigid trailer hitches are trailer mechanisms that rigidly connect the towing vehicle and the towed vehicle using one or more rigid tow bars/linkage structures. Compared to soft tow ropes/chains, these devices maintain a fixed distance and relative posture between the two vehicles during towing, reducing risks such as sudden braking, skidding, rear-end collisions, and 'swivel' maneuvers. A typical configuration includes the tow bar body, hook/pin mechanisms at both ends (connected to the towing points of the leading and trailing vehicles or the vehicle frame), a safety locking structure, and some adjustable length or folding mechanisms. They can be used for scenarios such as breakdown vehicle rescue, special vehicle convoy towing, and vehicle relocation within airports/factories, and are suitable for towing conditions requiring consistent direction of both vehicles, controllable force, and high safety standards. In 2025, sales reached 1.75 million units, with an average price of \$420 per unit, total production capacity of 2 million units, and a gross profit margin of 33%.
