Abstracts

According to our (Global Info Research) latest study, the global Riser Monitoring System (RMS) market size was valued at US\$ 66 million in 2024 and is forecast to a readjusted size of USD 99 million by 2031 with a CAGR of 5.1% during review period.

The Riser Monitoring System (RMS) is an advanced digital offshore solution designed to monitor and optimize the performance of risers and ducts in real time. The system provides key data such as wave height, period, current profile, acceleration, displacement of the rig and platform, and fatigue damage accumulation through sensors such as ground wave radar, accelerometers and water level gauges. These real-time data help operators make more informed decisions in offshore operations, reduce non-productive time due to conservative measures, and improve overall operational efficiency. The advantage of RMS is that it eliminates the conservatism in traditional analysis methods, enhances safety, improves situational awareness, and optimizes future riser analysis and operation models through continuous monitoring and data analysis.
