Robertshaw double-lumen tubes are professional medical devices, mainly used in fields such as thoracic surgery and airway management. Robertshaw double-lumen tubes are medical devices made of transparent plastic (such as PVC) with two independent lumens, one for ventilation and one for drainage. Its unique design enables double-lung isolation and single-lung ventilation in thoracic surgery, thus meeting the strict requirements for respiratory management during surgery. Robertshaw double-lumen tubes are available in a variety of models to meet the needs of different patients. Common models include small, medium and large specifications, as well as single-use PVC tubes using the French measurement method (outer circumference expressed in millimeters). Women generally use 35Fr and 37Fr, and men generally use 39Fr and 41Fr. Robertshaw double-lumen tubes are mainly used in thoracic surgeries, such as lung cancer resection, esophageal cancer surgery and other scenarios that require double-lung isolation and single-lung ventilation. In addition, they are also widely used in areas such as respiratory management and critical care.

As an important product in the field of medical devices, Robertshaw double-lumen tubes are mainly used in medical scenarios such as thoracic surgery and airway
