Millimeter-wave radar sensor is a sensing device based on millimeter-wave technology that can transmit and receive millimeter-wave signals to detect and measure parameters such as the distance, speed, and direction of objects. In robotic systems, millimeter-wave radar sensors are widely used in environmental perception, obstacle detection, autonomous navigation, and obstacle avoidance. The packaging technology is to integrate millimeter-wave radar sensors and their related components (such as antennas, transceiver modules, signal processing circuits, etc.) into a compact and reliable module so that it can be installed on the robot. Robot millimeter-wave radar packaging technology refers to the technology of integrating and packaging millimeter-wave radar sensors and their related components into robotic systems.
