According to our (Global Info Research) latest study, the global Rubber Hose for Automotive market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The application of rubber tube in automobile is mainly to connect engine and air filter, engine and radiator system, automobile air conditioning system, etc. As a component of the air intake system, it is close to the engine, so it needs high temperature resistance, oil resistance, corrosion resistance, aging resistance, low temperature resistance, etc. There are many kinds of materials according to different processing techniques, such as NBR nitrile rubber is widely used. Vacuum brake pipe, good oil resistance and high glue content, but relatively poor ozone resistance; EPDM EPDM rubber is used for automobile water pipe series.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
