A Safety Winged IV Needle is an advanced version of the traditional winged IV needle, designed with an integrated safety mechanism to prevent accidental needlestick injuries. The needle is equipped with a safety shield or a retractable cover that automatically activates after the needle is removed from the vein, ensuring that the needle tip is safely enclosed. This feature significantly reduces the risk of accidental pricks, which is particularly important in healthcare settings where exposure to bloodborne pathogens is a concern. It is commonly used for blood collection, medication administration, and intravenous fluid infusion, offering both patient and healthcare worker safety.
