Abstracts

According to our (Global Info Research) latest study, the global Samarium-Iron Alloy market size was valued at US\$ 154 million in 2025 and is forecast to a readjusted size of US\$ 222 million by 2032 with a CAGR of 5.3% during review period.

In 2025, the global production of samarium-iron alloy is estimated to be approximately 2,680 tons, with an average selling price of about US\$56 per kilogram. The scale of single-line production capacity varies depending on the production process and investment scale, with an average gross profit margin of approximately 15-25%. Samarium-iron alloy is an alloy of samarium and iron, belonging to the category of rare earth permanent magnet materials or magnet components. It is known for its wide operating temperature range and high magnetic properties, and is often used in applications requiring high operating temperatures, replacing some samarium-cobalt magnets. It is an important component in the field of advanced functional materials.

The upstream raw materials for samarium-iron alloy mainly include samarium elements from rare earth resources, as well as alloy metals such as iron, cobalt, and zirconium. Its downstream applications are primarily in the field of high-performance permanent magnet materials, particularly samarium-cobalt permanent magnets and samarium-iron-nitrogen bonded magnets. These are widely used in aerospace, national defense, high-end industrial, automotive, and medical equipment industries to meet demanding operating conditions such as high temperature, high stability, and lightweight requirements.
