Schlieren instrument, also known as Schlieren system or Schlieren optical system, is an optical instrument based on the principle of light refraction and diffraction to observe and analyze physical phenomena such as fluid flow, combustion process, material deformation, etc. It is mainly used to visualize the density gradient or temperature gradient in the fluid, as well as the tiny deformation of the surface of the object.

In the future, Schlieren will further integrate more advanced technologies, such as machine learning and artificial intelligence, for automated analysis and decision support. In addition, with the development of materials science, Schlieren will also adapt to a wider range of material types, including flexible electronic materials, nanomaterials, etc., and be able to deal with more complex problems.
