Scrubbing sand is a type of sand that has undergone scrubbing, desliming, drying, and high surface treatment. The particles are round, the surface is clean, and there are no cracks. It has low micro powder content, low mud content, low water content, and can achieve maximum bonding strength with minimal adhesive. Scrubbing sand for casting is a commonly used sand cleaning material in the casting industry. It is mainly used for surface cleaning and smoothing of casting molds and castings, helping to remove impurities, oxide layers, sand particles, etc. attached to the mold surface, making the casting surface smoother and improving the appearance and accuracy of the casting.
