According to our (Global Info Research) latest study, the global SDS-PAGE Electrophoresis Run Buffer market size was valued at US\$ 95.69 million in 2025 and is forecast to a readjusted size of US\$ 182 million by 2032 with a CAGR of 9.8% during review period.

SDS-PAGE running buffer is an electrophoresis buffer used in the protein separation stage of polyacrylamide gel electrophoresis. Its main function is to provide a stable pH environment and ionic strength, ensuring that proteins migrate in the electric field according to their molecular weight differences with a uniform negative charge density after SDS treatment. This buffer typically contains Tris, glycine, and SDS, which maintains constant conductivity and reduces heat accumulation, making the electrophoresis process stable and the bands clear. It is an indispensable basic reagent in protein analysis experiments. In 2024, sales volume was 580,000 units, with an average price of US\$145, total production capacity of 650,000 units, and a gross profit margin of 75%.
