Sectional Movable Valve is a pipeline control device that can divide the pipeline into multiple sections, each of which can be adjusted independently. The valve achieves precise control of fluid flow through the movement of its internal active parts (such as the valve plate or piston) up and down in the valve body. This valve has a compact design, easy operation, and good sealing performance. It is widely used in petrochemical, chemical, metallurgical and other fields to ensure stable and uniform flow of fluid in the pipeline.
