The Self-Propelled Straw Blower is an agricultural machine designed for efficient spreading of grass and mulching materials. It integrates a power unit and a spreading system, and can be driven by itself without external traction. The equipment uses a powerful blowing system to evenly spread straw, hay, wood chips or mulching materials to a designated area. It is often used in application scenarios such as farmland covering, soil stabilization, vegetation restoration, and feed distribution in livestock farms. The self-propelled straw blower has a precisely controlled covering capability and adjustable spreading direction and range, which significantly improves the covering efficiency and quality while reducing labor and time costs.
