Abstracts

According to our (Global Info Research) latest study, the global Semi-synthetic Compressor Oil market size was valued at US\$ 1911 million in 2025 and is forecast to a readjusted size of US\$ 2689 million by 2032 with a CAGR of 5.0% during review period.

Semi-synthetic compressor oil is a lubricating fluid formulated by blending mineral base oils with a proportion of synthetic base stocks (such as PAO or ester) and performance additives, designed to provide better thermal stability, oxidation resistance, lubricity, and service life than fully mineral oils while remaining more cost-effective than fully synthetic lubricants; it is widely used in rotary screw, reciprocating, and vane compressors operating under moderate to high temperatures and pressures. The supply chain starts upstream with crude oil refining (for mineral base oils), chemical synthesis of synthetic base stocks, and additive production (anti-wear, anti-oxidant, anti-foam, corrosion inhibitors), followed by midstream blending and formulation by lubricant manufacturers, quality control and certification, and downstream packaging, distribution, and sales through OEM channels, industrial lubricant distributors, and MRO suppliers to end users in manufacturing, energy, HVAC, refrigeration, mining, and general industrial compressed-air systems. In 2025, the global semi-synthetic compressor oil market produces about 410,000 tons against an installed capacity of around 510,000 tons per year, with average unit prices of USD 3,200–5,800 per ton and an average gross margin of roughly 32%.
