## Abstracts

According to our (Global Info Research) latest study, the global Shaft Grounding Solid Ring market size was valued at US\$ 87.46 million in 2025 and is forecast to a readjusted size of US\$ 137 million by 2032 with a CAGR of 6.6% during review period.

A Shaft Grounding Solid Ring is a grounding device mounted around the shaft of electric motors and rotating equipment to provide a low-impedance path for shaft currents to discharge safely to ground. This protects bearings and other components from harmful high-frequency currents induced by variable frequency drives and other power electronics. Solid rings are constructed with conductive metal or engineered conductive fiber elements and designed for durability and reliable electrical contact in industrial environments. In 2025, global Shaft Grounding Solid Ring sales reached approximately 170 K Units, with an average price of 500 US\$/Unit, and gross margin is around 20%-40%.

The shaft grounding solid ring industry chain starts upstream with raw materials such as copper alloys, stainless steel, carbon-based conductive materials, and insulation components; the midstream focuses on precision machining, integration of conductive structures, and assembly and testing to produce standard or customized solid grounding rings; downstream demand comes from OEMs and aftermarket services for motors, generators, wind turbines, pumps, and compressors, where these rings are used to mitigate shaft currents and extend bearing life.
