Shield box is a kind of shielding body with various shapes made of conductive or magnetic conducting materials, which limits the electromagnetic capacity to a certain space and is used to suppress radiation interference. It also deals with the conduction and radiation, so as to provide a non-interference test environment for the tested wireless communication equipment.

Shielding effect: One is to limit the radiation electromagnetic energy inside the equipment to exceed a certain area, that is, to absorb the internal interference signal.

The second is to prevent the external radiation electromagnetic energy from entering a certain area, that is, to shield the external interference signal. Shielding concept: refers to the ratio of electric field strength, magnetic field strength or power of a point in the space before and after the shielding box is placed, and then takes the logarithm ($\lg P_1 / P_2$), which is expressed in dB.
