Abstracts

According to our (Global Info Research) latest study, the global Shock Wave Soot Blower market size was valued at US\$ 43.8 million in 2023 and is forecast to a readjusted size of USD 66.5 million by 2030 with a CAGR of 6.1% during review period.

The shock wave soot blower is a special cleaning device used to remove accumulated ash and deposits in boilers, heat exchangers and other industrial heating equipment. It loosens and removes ash attached to the heating surface by generating strong compressed air shock waves or shock waves, thereby improving the heat exchange efficiency of the equipment, reducing energy consumption, and extending the service life of the equipment.

With the development of renewable energy (such as biomass energy and waste incineration power generation), the application of shock wave soot blowers in these new energy conversion devices has gradually increased, helping to solve the problem of dust accumulation caused by the complex characteristics of fuel. In addition to traditional thermal power generation, petrochemical and other industries, shock wave soot blowers have also begun to enter other industrial fields such as cement and metallurgy that require regular dust cleaning, broadening the market demand. Leading shock wave soot blower manufacturers are actively exploring overseas markets and enhancing their competitiveness by establishing localized sales and service networks. Emerging economies such as Asia, the Middle East and Africa have become important target markets.
