Abstracts

According to our (Global Info Research) latest study, the global Short Length Multi Walled Carbon Nanotubes(Short Length MWCNT) market size was valued at US\$ 296 million in 2025 and is forecast to a readjusted size of US\$ 568 million by 2032 with a CAGR of 9.8% during review period.

Short length multi walled carbon nanotubes (Short Length MWCNT) are specially treated SMNTs whose length is significantly shortened to the micrometer or even submicrometer level, while their diameter remains at the nanometer scale. The demand for SMNTs stems primarily from the urgent need in high-end manufacturing for high-performance, easily processable nanocomposite materials. Traditional long carbon nanotubes are prone to aggregation and difficult to disperse, severely limiting their industrial applications. Therefore, the market requires a carbon nanotube variant with excellent dispersibility, good bonding with matrix materials, and ease of large-scale processing to fully leverage its reinforcing, conductive, and thermally conductive properties, driving the development of 'shortened' products. The upstream core consists of large-scale synthesizers of high-quality SMNTs and suppliers of equipment and processes providing precision cutting/oxidation post-processing technologies. The downstream directly serves high-end composite material manufacturers (such as automotive lightweight components and aerospace materials), new energy companies (lithium battery conductive agents), specialty coating companies, and electronic device manufacturers. Their products, as key nanoscale functional additives, are deeply embedded in the manufacturing chains of these high-value-added end products. In 2025, the production of short length MWCNT is expected to reach approximately 9,600

tons, with an average selling price of approximately US\$30 per kilogram, a gross profit margin of approximately 35%, and a single production line capacity of approximately 200 tons per year.
