According to our (Global Info Research) latest study, the global Side-emitting LED Strip market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The side-emitting LED strip market refers to the segment within the LED strip lighting industry that specializes in products designed to emit light from the side, as opposed to traditional LED strips that emit light from the top or front surface.

Side-emitting LED strips are a popular choice for applications where the light needs to be diffused and evenly distributed along a surface, such as architectural lighting, signage, and backlighting applications. They are also commonly used in applications that require flexible and bendable lighting solutions, as the side-emitting design allows for greater flexibility and adaptability.

The market for side-emitting LED strips has seen significant growth in recent years, driven by factors such as increasing demand for energy-efficient lighting solutions, advancements in LED technology, and the growing popularity of smart lighting systems. The versatility and ease of installation of side-emitting LED strips have also contributed to their rising popularity.
