According to our (Global Info Research) latest study, the global Silicone Air Suction Cup market size was valued at US\$ 396 million in 2024 and is forecast to a readjusted size of USD 617 million by 2031 with a CAGR of 6.6% during review period.

The working principle of the silicone air suction cup is actually the principle of atmospheric pressure. When the suction cup is pressed to the object to be sucked, the air in the suction cup is drawn away from the pipeline on the suction cup by the vacuum pump, so that a vacuum is formed in the suction cup. The atmospheric pressure outside the sucker presses the sucker firmly on the object to be sucked so that it almost forms a whole and can move together.
