The single Beidou navigation and positioning module refers to a module that performs positioning based on the Beidou satellite navigation system independently developed by China. The single Beidou navigation and positioning module is a signal receiving device that can receive and demodulate the signals transmitted by the Beidou satellite navigation system for positioning. Its working principle is to measure the distance between the satellite with a known position and the user module, and then combine the data of multiple satellites to calculate the longitude and latitude information of the user module's location.
