A Single Chamber Hyperbaric Oxygen Chamber is a medical device designed to deliver hyperbaric oxygen therapy (HBOT) to a single patient at a time. In this therapy, the patient enters a pressurized chamber where they breathe 100% oxygen at pressures higher than normal atmospheric levels. This increased pressure allows more oxygen to dissolve in the blood and reach tissues throughout the body, promoting healing and aiding in the treatment of various medical conditions, such as non-healing wounds, carbon monoxide poisoning, and certain infections. The single chamber is typically a sealed, transparent enclosure that accommodates one person, providing a controlled environment for the therapy.
