A siphonic toilet, also known as a siphon-jet toilet, is a type of flushing toilet that uses a siphonic action to remove waste and water from the bowl. It's one of the most common types of toilets in residential and commercial settings. The term 'siphonic' refers to the siphoning action that occurs during the flushing process.

Water Efficiency: Water conservation remains a prominent trend in the toilet industry. Siphonic toilets have been adapting to meet or exceed water efficiency standards and regulations, such as the U.S. Environmental Protection Agency's WaterSense program. Manufacturers are designing siphonic toilets with dual-flush options and low-flow capabilities to reduce water usage per flush.

High-Efficiency Toilet (HET) Designs: Siphonic toilets are increasingly incorporating high-efficiency features to provide effective waste removal while using less water per flush. These designs align with sustainability and water conservation goals.

Improved Flushing Technology: Manufacturers are developing more efficient flushing systems for siphonic toilets, ensuring that they can effectively remove waste in a single flush. Advancements in trapway design and jet-flushing technologies have contributed to this improvement.
