According to our (Global Info Research) latest study, the global Skinfold Thickness Meter market size was valued at US\$ 19.2 million in 2024 and is forecast to a readjusted size of USD 25.1 million by 2031 with a CAGR of 3.9% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The skinfold thickness meter is a medical device used to measure the skinfold thickness of the human body. The main test parts are the triceps brachii and the lower angle of the scapula. About 2/3 of the body's fat is stored in subcutaneous tissue. By measuring the thickness of subcutaneous fat, we can not only understand the thickness of subcutaneous fat and judge a person's obesity, but also estimate the amount of fat in the whole body to evaluate the proportion of human body composition. This is the easiest way to assess body composition. Subcutaneous fat thickness can be used to initially evaluate the nutritional status of the person being measured, thereby providing a basis for nutritional support. Skinfold thickness is an indicator of body fat content. This method is simple and easy to perform, but requires specially trained personnel to measure it.

A skinfold pachymeter is a device used to measure the thickness of the body's subcutaneous fat, often used to assess body composition and health. As people's attention to health and fitness continues to increase, the market demand for skinfold thickness gauges continues to grow. More and more people are paying attention to their body composition and hope to monitor and manage their health through scientific

methods. In addition to the traditional fitness and health fields, the application fields of skinfold thickness meters are also constantly expanding. For example, some medical institutions and scientific research institutions have also begun to use skinfold thickness meters to evaluate patients' body composition and health status, providing more accurate data support for clinical diagnosis and treatment. Overall, the skinfold thickness meter market will maintain continued growth.
