A sling system for Stress Urinary Incontinence (SUI) is a surgical treatment designed to provide support to the urethra or bladder neck, which helps prevent involuntary urine leakage caused by physical activities such as coughing, sneezing, or exercise. The procedure involves placing a small strip of synthetic mesh or biological tissue under the urethra to create a supportive hammock. This support helps keep the urethra closed during activities that increase abdominal pressure, thereby reducing or eliminating urine leakage. The sling procedure is minimally invasive and can be performed under local or general anesthesia, with a relatively quick recovery time. It is considered an effective treatment for SUI, offering long-term relief and improved quality of life for many patients.
