A waterproof micro switch is a miniature switch with waterproof function, which is widely used in environments that require waterproof or moisture-proof. This switch is usually used in electrical control systems and can continue to work normally when it is intruded by a certain degree of water or moisture. The main difference between it and ordinary micro switches is its housing and sealing structure, which can effectively prevent water, dust or other external substances from entering the switch, thereby protecting the internal electrical components of the switch and ensuring the long-term stability and reliability of the switch.
