Smart lighting controllers and smart lighting control modules are an integral part of modern lighting systems. They can provide various functions, such as remote control, timing setting, brightness adjustment, color temperature adjustment, etc.

Intelligent lighting controller is an advanced lighting control device, its main function is to control the brightness, color temperature, and switch of lights in the lighting system. Outside the controller, smart phones/tablets/computers based on WiFi or Bluetooth communication protocols can be used with corresponding control APPs to control the smart lighting controller. In addition, the intelligent lighting controller also supports various sensors such as light sensing and temperature sensing, which can realize automatic control.

As an important part of scene interconnection, intelligent lighting has been continuously expanded in recent years with the continuous extension of the concept of intelligent life, and its demand has continued to grow, and it will further usher in rapid development. In 2022, the global wireless intelligent lighting control system market will reach 25.155 billion yuan (RMB), and the Chinese wireless intelligent lighting control system market will reach 7.013 billion yuan. It is estimated that by 2028, the global wireless intelligent lighting control system market will reach 56.654 billion yuan. The wireless smart lighting control system market is estimated to grow at a CAGR of 14.39% during the forecast
