According to our (Global Info Research) latest study, the global Solketal market size was valued at US\$ 13.1 million in 2024 and is forecast to a readjusted size of USD 4.9 million by 2031 with a CAGR of -13.2% during review period.

Solketal (CAS 100-79-8) is a protected form of glycerol with an isopropylidene acetal group joining two neighboring hydroxyl groups. Solketal contains a chiral center on the center carbon of the glycerol backbone, and so can be purchased as either the racemate or as one of the two enantiomers. Solketal has been used extensively in the synthesis of mono-, di- and triglycerides by ester bond formation. The free hydroxyl groups of solketal can be esterified with a carboxylic acid to form the protected monoglyceride, where the isopropylene group can then be removed using an acid catalyst in aqueous or alcoholic medium. The unprotected diol can then be esterified further to form either the di- or triglyceride.

The major players in global Solketal (CAS 100-79-8) market include Solvay, Loba Feinchemie AG, CM Fine Chemical, etc. The top 3 players occupy about 50% shares of the global market. Asia-Pacific and Europe are main markets, they occupy about 70% of the global market. Purity 96%-98% is the main type, with a share about 60%. Solvent is the main application, which holds a share about 75%.
