The spinal decompression machine is a medical device mainly used to treat spinal diseases such as lumbar disc herniation and spinal stenosis. It simulates weightlessness to relax the back muscles, uses a nonlinear logarithmic curve to reduce pressure, expands the spinal space, forms a continuous high negative pressure, helps the disc heal from the inside out, and relieves the compression of nerves and blood vessels. The spinal decompression machine is suitable for the treatment of pain caused by lumbar disc bulging or protrusion, acute or chronic back pain, persistent pain caused by disc degeneration, sciatica, posterior facet syndrome, discogenic pain caused by lumbar disc degeneration, rehabilitation and treatment after lumbar disc intervention and surgery, lumbar muscle strain, scoliosis, etc. The spinal decompression machine is a non-surgical treatment option that provides patients with a painless, non-invasive treatment option with relatively low risk through physical therapy.
