Sponge gauze pads are absorbent medical dressings made from a soft, porous material that resembles a sponge. They are typically constructed from layers of gauze, which is a type of sterile, woven fabric made from cotton or other natural fibers. These pads are designed to be highly absorbent, allowing them to soak up and retain fluids, such as blood, pus, or other bodily secretions. They are commonly used in wound care to clean, protect, and promote healing by absorbing excess moisture and debris from the wound site. Sponge gauze pads are available in various sizes, thicknesses, and sterile packaging to suit different medical needs and can be easily cut or shaped to fit the specific wound area.
