The sponge foam rebound tester allows a steel ball of specified diameter and mass to fall freely onto a sponge foam plastic sample from a specified height, and automatically calculates the percentage of the maximum height of the steel ball rebounding to the height of the steel ball falling (i.e. the rebound rate), and uses the rebound rate to express the rebound performance of the foam plastic.

The sponge rebound tester plays an important role in the quality control, performance evaluation and R&D support of sponge products. Although there are certain limitations, by choosing the right tester, professional training and regular maintenance, its advantages can be fully utilized and the testing needs can be met.
