## Abstracts

According to our (Global Info Research) latest study, the global Spring Recycling and Remanufacturing Services market size was valued at US\$ 6698 million in 2025 and is forecast to a readjusted size of US\$ 12000 million by 2032 with a CAGR of 8.8% during review period.

Spring recycling and remanufacturing services are a professional circular economy solution focused on the systematic processing of scrapped or used springs and spring assemblies from the automotive, industrial equipment, and energy sectors. The service encompasses two core aspects: First, recycling – environmentally friendly recycling of springs that cannot or do not require remanufacturing, reintroducing their metal materials into the raw material recycling system. Second, remanufacturing – for core spring components with remanufacturing value, a rigorous industrial process (disassembly-cleaning-inspection-repair/strengthening-assembly-testing) is followed to restore them to the performance specifications of the original equipment manufacturer (OEM), equivalent to the quality and warranty of new products. The upstream supply chain mainly includes suppliers of scrapped springs, such as automotive dismantling plants, industrial equipment maintenance providers, machinery manufacturing plants, and scrap metal recycling networks, who provide the core raw material – used springs. The downstream supply chain is the output channel for the remanufactured finished products, primarily flowing to end users who require cost-effective spare parts, including the automotive aftermarket (repair shops, fleets), OEM after-sales service systems, various industrial equipment users, and dealer and distributor networks. The demand fundamentally stems from customers' dual pursuit of cost reduction, efficiency improvement, and sustainable development. Specifically, this manifests as companies seeking to reduce new component procurement and inventory costs, minimize

equipment downtime, and simultaneously meet increasingly stringent environmental regulations, reduce their carbon footprint, and achieve their ESG (Environmental, Social, and Governance) goals. In 2024, the average selling price for spring recycling and remanufacturing services was approximately \$10-\$5,000 per spring, with a gross profit margin of approximately 40%.
