According to our (Global Info Research) latest study, the global Squirrel-cage Induction Motor market size was valued at US\$ 15300 million in 2024 and is forecast to a readjusted size of USD 19050 million by 2031 with a CAGR of 3.2% during review period.

Squirrel cage motor is one of the types of induction motors. In order to generate motion, it hardens electromagnetism. As the output shaft is connected to the rotor inner component which is looking like a cage. Hence it is called squirrel cage. The two-end caps i.e, circular in shape are joined by rotor bars. These are acted based on the EMF i.e, generated by the stator. This EMF is also generated outer housing that is made of laminated metal sheets and wire coiling. The two main parts of any type of induction motor are the stator and the rotor. The squirrel cage is a simple method of pulling an electromagnetic induction effect.

From the perspective of product type and technology, according to the research and interviews on the Squirrel-cage Induction Motor market, the voltage below 1000V is mainly classified as low-voltage type, and the voltage above 1000V is classified as high-voltage type Squirrel-cage Induction Motor. According to the market application survey and analysis, low-voltage Squirrel-cage Induction Motor occupies the main market share due to its wide downstream application.

Based on application, Squirrel-cage Induction Motor has the characteristics of simple structure, reliable operation, high efficiency, convenient maintenance and low price, and is widely used in metallurgy, petroleum, chemical industry, water conservancy and hydropower and other industrial fields. In recent years, the proportion of squirrel cage

asynchronous motors in industries such as metallurgy, mining, and petrochemical industries has gradually decreased, while the proportion of industries such as chemical industry, food and beverage has increased.
