According to our (Global Info Research) latest study, the global Stainless Steel Eccentric Butterfly Valve market size was valued at US\$ 759 million in 2024 and is forecast to a readjusted size of USD 970 million by 2031 with a CAGR of 3.6% during review period.

Stainless steel eccentric butterfly valve is a valve that controls the flow rate, pressure, and temperature of fluid medium by rotating the butterfly plate. According to the different sealing forms, stainless steel eccentric butterfly valves can be divided into two types: soft seal type and hard seal type. Soft sealing type generally uses rubber ring sealing, suitable for water conservancy and water treatment fields at room temperature; Hard sealed types typically use metal to metal, metal to fluoroplastic, and multi-layer composite board seals, which can adapt to high working temperatures and pressures, but have relatively poor sealing performance. They are generally used in situations where low sealing performance is required and flow rates are adjusted.
